

EXPLORING NEW ROUTES TO SUCCESS

MPM are delighted to be making moulds and components for the introduction of a very exciting new project, which involves the creation of a modular caving system.

Currently Hang Fast's caving systems are bespoke. This new modular system allows greater flexibility and increasingly cost effective solutions to widen out the opportunities to many more centres and facilities worldwide.

composite innovations

"We found MPM on the internet, and once we saw that they had the ability to manufacture our new product, we went to visit them. Even though they were incredibly busy, they took time to show us around and really impressed us with their systems and processes. Not just another manufacturer, one which was a professionally run business, with production schedules that are clear to follow so we know exactly when we will get our product. No false promises. We had no need to look elsewhere, we immediately knew MPM were the right fit for our business."

"We are very excited by the opportunities that this new modular system provides, knowing that we have an open and honest partnership with MPM, we are very much looking forward to this relationship growing. Already MPM have added value to our business and are offering advice and helpful suggestions to both assist in areas of design and the future growth of the project."

JOHN BEERS DIRECTOR, HANGFAST CLIMBING

» Hang Fast Climbing MODULAR CAVING SYSTEM

» Hang Fast was founded in 2001, by director John Beers to provide a much needed after sales services to climbing wall facilities in the form of inspections and maintenance. It grew quickly and soon became the leading specialists for all types of artificial climbing structures, indoor caving systems, high ropes and assault courses. As market leaders in the design, manufacture and installation of artificial caving systems, Hang Fast provides indoor adventure solutions to the leisure, sport and outdoor activity sectors that are safe, affordable and flexible. With more than two decades of experience in creating

three dimensional textured climbing walls that simulate real rock, Hang Fast is now using these same technologies and skills to bring the exploration of underground caves to a rapidly expanding indoor market.

Their clients range from relatively small, privately owned and operated facilities, to leading European leisure industry specialists such as Center Parcs. They also include publicly financed outdoor education and activity centres and innovative regeneration and sports engagement projects.
